Engineering is about creating new solutions to existing or future problems. Engineers are problem solvers who employ science, math, analysis and synthesis to design unique and practical solutions to everyday problems. They must accomplish this often under the constraints of time, budgets, and safety and health issues. Engineers also must be concerned about the environmental, political and social impact their answers will create.

Engineering majors at Pitt-Bradford complete a two-year program that involves courses in engineering, chemistry, calculus, and physics. After completing the two years students can relocate to the School of Engineering at the University of Pittsburgh in Pittsburgh to complete a bachelor’s degree in chemical and petroleum engineering, computer engineering, mechanical engineering, civil and environmental engineering, or electrical engineering.
